**HEALTH INDICATORS**

***Drug/Alcohol-Related Deaths***

These statistics are derived from the medical information reported on the death certificate by the attending physician or coroner. The medical certification item on certificates of death makes provision for the reporting of three causes of death—immediate, intervening, and underlying-- plus additional information related to the cause of death.

The cause of death selected for coding and tabulating in this report is “the underlying cause of death,” which is generally defined as that which initiated the sequence of events leading directly to death. Causes of death are coded according to the Ninth Revision International Classification of Diseases.

The traditional method of reporting alcohol-involved mortality included only those diagnoses in which alcohol use or abuse was the primary causal factor. However, since most medical and social problems are multifactorial, mortality was an intentional simplification of the complex etiology of those diagnoses. Multiple lifestyle factors may interact in the determination of a single disease outcome. For example, both alcohol use and cigarette smoking are major predictors of esophageal cancer. In determining causality, it is important to recognize the co-morbidity that exists among diagnoses. With this in mind, the Centers for Disease Control of the U. S. Public Health Service developed the concept of “Alcohol-Attributable Fractions” (AAFs) in a report entitled Alcohol-Related Disease Impact.<sup>1</sup> They define an AAF as the estimated proportion of deaths from disease or injury that is causally linked to alcohol use and abuse. Diagnosis-specific estimates of relative risk for alcohol-related chronic diseases were determined from a literature review of epidemiological and clinical studies. AAFs were also estimated from injury surveillance studies that reported alcohol involvement.

Use of the AAF methodology presents a more comprehensive picture of the pervasive impact of alcohol use and abuse on health than the traditional method. For example, using the traditional method, there were 3,484 alcohol-related deaths reported in California in 1994. That number is 13,494 using the AAF method (i.e., all AAFs). The AAF methodology was first applied to California mortality data in 1990 and is described in a report entitled Alcohol-Related Mortality: California, 1979-1988.<sup>2</sup>

- **Alcohol-Related Deaths (only AAFs that=1.0)** is the traditional alcohol-related deaths category which includes deaths directly attributable to alcohol.
- **Alcohol-Related Deaths (All AAFs)** include all deaths causally linked to alcohol use and misuse.

---

<sup>1</sup> Schultz, J.M., Parker, D.L., Rice, D.P. Alcohol-Related Disease Impact. DHSS, Centers for Disease Control. 1989.

<sup>2</sup> Sutocky, J. Alcohol-Related Mortality: California, 1979-1988, California Department of Health Services, Data Retrieval and Analysis Section, October 1990.

### ***AIDS Cases Diagnosed***

The number of cases of Acquired Immune Deficiency Syndrome diagnosed during a specific year is reported. Both the total numbers of cases diagnosed and the intravenous drug use (IVDU) cases are reported. This information is provided by the Department of Health Services, Office of AIDS – AIDS Case Registry. Due to confidentiality issues, when less than three cases are reported an asterisk represents the number.

### ***Serum Hepatitis (Type B)***

Hepatitis is an inflammation of the liver, usually accompanied by fever and other systemic manifestations. The reporting physician makes diagnosis of either Type A or B. Homosexual males and users of illicit injectable drugs are among the groups acquiring the highest rate of Type B. Department of Health Services, Communicable Disease Control Surveillance and Statistics Section is the source of this data.

## **CRIMINAL JUSTICE**

### ***Drug-Related Arrests***

These arrests occur when persons are taken into custody because they are believed to have violated drug laws. Drug law violations include narcotics (heroin, cocaine, etc.), marijuana, dangerous drugs (barbiturates, phencyclidine, etc.), and other drug law violations. Arrests are divided into two major groups: adult arrests (18 years of age and older) and juvenile arrests. The Department of Justice maintains these statistics.

### ***Alcohol-Related Arrests***

These statistics, which are maintained by the Department of Justice, count those arrests occurring when persons are taken into custody because they are believed to have violated alcohol laws. Alcohol law violations include driving under the influence, public drunkenness, and liquor law infractions.

### ***Drug Commitments to California Rehabilitation Center***

This is a compilation of the number of criminals deemed to have a drug problem who are sent to the rehabilitation center for drug treatment for a portion of their sentence. These statistics are maintained and provided to the Department of Alcohol and Drug Programs by the Department of Corrections.

### ***Drug Commitments to Department of Corrections***

This is a count of persons committed to correctional facilities for a drug offense.

### ***Drug Commitments to California Youth Authority***

Data in this category represents the total of first commitments for youth sent to California Youth Authority facilities for drug offenses. A youth falls into this category when any one of the five most serious offenses is a drug offense.

## **ALCOHOL AND DRUG TREATMENT INDICATORS**

### ***California Alcohol and Drug Data System (CADDS)***

CADDS collects information on persons receiving recovery or treatment services from alcohol and drug programs that provide publicly funded services or services licensed by the State.

(CAPPs) for gathering the data on clients receiving alcohol treatment services and California Drug Abuse Data System (CAL-DADS) for gathering the data on clients receiving drug

***Hospital Discharges (Alcohol and Drug Primary Diagnosis)***

The Office of Statewide Health Planning and Development (OSHPD) collects inpatient record for each acute care hospital discharge. Freestanding chemical dependency recovery hospitals, as well as distinct part units of acute care hospitals treating patients for alcohol abuse,

***Hospital Discharges Expanded (Alcohol and Drug Primary Diagnosis Plus Eight Other Diagnoses)***

addition to the “Indicators of Alcohol and Drug Abuse.” The “expanded” section includes all records in the database where alcohol or drugs are noted in any of these eight diagnostic

other drugs primary diagnostic code or those discharges determined to be from an alcohol and drug rehabilitation hospital/facility. In 1996, the principal plus eight other diagnoses were

**CALIFORNIA HIGHWAY PATROL DATA**

***Alcohol-Involved Accidents***

percentage of all motor vehicle accidents which involved the use of alcohol.

**DEPARTMENT OF MOTOR VEHICLES**

***Suspension/Revocation of Driver’s License***

The Department of Motor Vehicles maintains these statistics. The data represents court actions taken against persons under the influence.

**POPULATION DATA**

Department of Finance, Demographic Unit provides the annual population estimates. The July 1, 1999 report reflects revised estimates of the population, which are included in the indicator sheets.

**MISCELLANEOUS**

In the report an ellipses symbol (...) is used to indicate that data is not available for inclusion in this report.

An asterisk (\*) in this report refers only to the 1998 data. The values represented by other asterisks for previous years may differ from the 1998 representative value.
